PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience at a product startup, working on real-world web applications used in production. Built and improved backend services and real-time interview features, with a focus on performance and reliability.

PROFESSIONAL EXPERIENCE

InterviewBuddy - Associate Software Development Engineer

Jul 2024 - Present

- End-to-end development of the official website rebranding, making architectural decisions that resulted in improved SEO rankings and a 40% reduction in page load times.
- Designed and implemented a real-time interview room using Twilio and Socket.io, enabling low-latency collaboration (video, code, whiteboard) and real-time event logging for debugging.
- Built an adaptive 'Gen AI Interview' module that processes candidate video responses using FFmpeg to drive context-aware follow-up questions and automated performance grading.
- Implemented end-to-end payment systems supporting domestic (Razorpay) and international (PayPal) transactions, featuring a custom coupon management system for discounts and automated refund processing.
- Reduced engineering dependency for content updates by integrating Strapi CMS, enabling the marketing team to publish blogs independently.
- Worked on Dockerized deployments that improved system stability, contributing to 99.99% uptime and a ~40% reduction in MTTR through better debugging and hotfix workflows.
- Developed a configurable assessment service supporting diverse question formats and enforced strict proctoring rules to ensure test integrity.
- Designed scalable database schemas for complex features, optimizing query performance and ensuring data integrity.

InterviewBuddy - Software Engineer Intern

Jan 2024 - Jun 2024

- Refactored the core interview management module to improve code maintainability and secured platform data by implementing granular Role-Based Access Control (RBAC).
- Engineered a transactional notification service using React Email, ensuring reliable delivery of interview schedules and updates to thousands of users.

PROJECTS

Desktop Clipboard Manager | Go (Golang), Fyne, Linux

- Built a lightweight clipboard history manager in Go with a custom Fyne GUI, featuring real-time fuzzy search, keyboard navigation, and persistent JSON storage for up to 500 entries.
- Implemented a background daemon using Goroutines and channels for non-blocking clipboard monitoring, with graceful shutdown handling via OS signals.
- Designed a modular architecture with separate packages for storage, daemon, and UI, integrated with systemd for auto-start on Linux desktops.

SKILLS

Languages: TypeScript, JavaScript, Go

Frontend: Angular, React, Nextjs, Tailwind CSS, HTML/CSS

Backend: NestJS, Node.js, Express.js, Prisma, REST APIs, WebSockets

Databases: PostgreSQL, Redis, MongoDB

DevOps & Cloud: Docker, Nginx, Linux, Portainer, DigitalOcean

APIs & Tools:

GraphQL, Socket.io, Git & GitHub, Twilio, FFmpeg.

EDUCATION

B.Tech in Computer Science and Engineering (AI & ML)

Pragati Engineering College, Surampalem
2020-2024
